Greek Deep Tech: Analysis

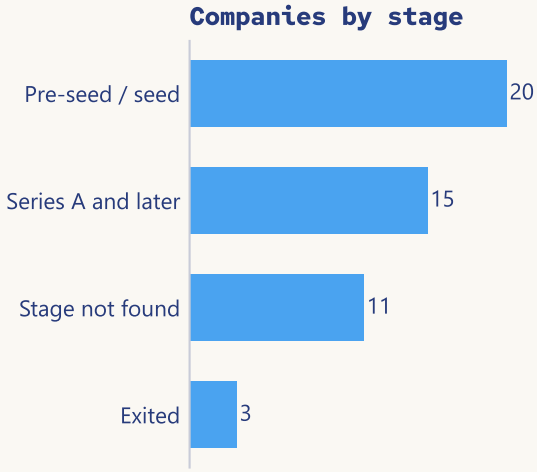

What is crowded, what is missing, how it is funded, who is active. Based on the 49 mapped companies in the dataset.

Read this first

The dataset has 63 rows: 49 mapped (26 Include, 23 Borderline), 6 on Hold because a Greek link or source could not be found after a second search, and 8 excluded. Every number below comes from those rows or from the sources listed on page 3. The 49 companies were found by sweeping VC portfolios and news lists, so they are a sample of the ecosystem, not a census. Counts show where evidence was found, not market share.

Shape of the map

Stage is read from the last round on record. Three exits sit on the map as context: Think Silicon (acquired by Applied Materials, 2020), MarineTraffic (Kpler, 2023) and Augmenta (CNH Industrial, 2023, enterprise value USD 110M).

What is crowded

- Robotics & Drones (12 names) and Health & Biotech (11) are the most populated boxes, and both are mostly early. In robotics, 5 of 12 companies are seed stage (Acumino, Progressive Robotics, Velos Rotors, Robenso, Bota Systems), one is an exit (Augmenta) and five have no external round found (Gizelis, Altus LSA, SAS Technology, Aether Aeronautics, Ucandrone). Health is more varied (Intelligencia, Anodyne Nanotech, Brainomix and Causaly are Series A or later).
- Defense and drones is where company count outruns venture capital. Altus LSA (Chania), SAS Technology (Athens), Aether Aeronautics (Chania), Ucandrone (Koropi) and Velos Rotors (Xylokastro) are all drone makers, yet only Velos Rotors (USD 2M seed, Marathon, 2023) has a disclosed venture round. A Greek press study cited by To Vima counts nine defense and dual-use startups raising a combined EUR 19.21M.
- AI is crowded with applications, not infrastructure. Moveo.AI, Bitloops, Keragon, Intryc, Pallma AI and Proxy Foods AI are application-layer companies; TileDB / Tile.ai (data infrastructure, USD 34M Series B, 2023) is the one infrastructure name.

Greek Deep Tech: Analysis

Gaps and funding patterns

What is missing

- Quantum: no verified venture-backed Greek company. PiDust (Patras, 2019) has only a 2020 source; QUBITECH is a single-source mention. Both are on Hold. The Quantum Zeitgeist guide says the country has no crowd of venture-funded quantum companies; research bodies lead.
- Space: no Greek-founded venture-backed space startup was found beyond Prisma Electronics (Alexandroupolis, funding not found). Demand exists: Greece announced a EUR 350M Hellas-Space 2.0 programme in August 2026, and Open Cosmos Aegean won a EUR 60M contract. But those flow to foreign-headquartered firms (Open Cosmos is UK-based; OroraTech, checked and excluded, is German).
- Semiconductors and hardware: five names (Circuits Integrated Hellas, SolidWatts, Think Silicon, Navenio, Axelera AI). Circuits Integrated's round (Evercurious, 2026-09) rests on one aggregator and has no disclosed amount. Axelera AI, the largest round tied to the ecosystem (more than USD 250M, February 2026), is Borderline: its CTO and co-founder is Greek and it hires engineers remotely in Greece, but no Greek office was found and its CEO is Italian.
- Energy and climate: three names (WeatherXM, Better Origin, Centaur Analytics). Piq Energy, which appears in Marathon's 2026 round list, is San Francisco-based with no Greek link found, so it is not on the map.
- The Series A bridge: of the 15 companies at Series A or later, only 3 list a Greek headquarters (WeatherXM, Delian Alliance Industries, DeepSea Technologies). At least 19 of the 49 mapped companies are headquartered outside Greece (for example Perceptual Robotics in the UK, TileDB in the US, Bota Systems in Switzerland). Greek capital seeds them; growth capital and headquarters tend to move abroad. HQ is unconfirmed for Causaly, Keragon and Achira AI.

Funding patterns

- Marathon Venture Capital data, reported by MoneyBuzz on 2026-10-11, counts USD 435M raised by Greek startups so far in 2026 across 38 rounds. Axelera AI's round is a large share of that (the article says about 57%). 25 rounds were seed (about USD 38M combined) and eight were Series A (about USD 50M combined).
- Totals depend on the source. Athens Tech Circle counts about EUR 1.45B across 100 deals in 2025 including debt and grants; a vendor guide (Ellty) cites EUR 732M. Do not compare these without checking their scope.
- In the dataset, 13 of the 15 disclosed seed-stage rounds fall roughly between USD 1M and 8M (mixed currencies, approximate). Acumino's USD 11.7M seed (June 2026) is the high outlier; Robenso (EUR 500K) is the low. Series A rounds run from USD 7.7M (WeatherXM) to USD 22.5M (iCOMAT).
- Public and quasi-public money matters in this sample: the EIB's EUR 20M venture debt to StiQ (excluded as foodtech), grants at Bitloops and Bioemtech, NATO Innovation Fund as co-lead at iCOMAT, and funds anchored by the Hellenic Development Bank of Investments (Evercurious VC).

Greek Deep Tech: Analysis

Active investors, caveats and sources

Most active investors in this dataset

Marathon Venture Capital — 10

Progressive Robotics, Velos Rotors, Augmenta, Delian, Hack The Box, Causaly, Bota Systems, Centaur, Code BGP, Pallma AI

Big Pi Ventures — 7

Acumino, TileDB, Intelligencia, ORamaVR, Anodyne Nanotech, Corsmed, Navenio

Metavallon VC — 7

Perceptual Robotics, Think Silicon, Anacalypsis, Better Origin, Bioemtech, Feel Therapeutics, Purposeful

Evercurious VC — 4

SolidWatts, ORamaVR, Anodyne Nanotech, Circuits Integrated

Genesis Ventures, Eleven Ventures, Uni.Fund, Velocity Partners VC, Air Street Capital — 2 each

see dataset

Caution: the sweep started from Marathon, Big Pi and Metavallon portfolios, so those three are over-represented by construction. Athens Tech Circle's H1 2025 ranking (all sectors) puts Genesis Ventures first (7+ deals), then THETI (4), with Uni.fund, Evercurious VC, VentureFriends and SPOROS Platform at 3 each. Marathon says 27 funds took part in 2026's 38 rounds. Foreign leads appear at later stages: Air Street, Carlyle, 8VC and ICONIQ Growth.

Newer fund capacity: Metavallon's EUR 5M Brain Gain pre-seed fund (January 2026), Kos Biotechnology Partners' USD 123M life-sciences fund (June 2026, single source), Big Pi's EUR 130M first close for its growth fund, and Marathon's EUR 75M latest fund.

Limits of this work

- 6 rows are on Hold (Koios Care, PiDust, QUBITECH, PolyModels Hub, NOFire AI, ClearDrop) after a second search; 8 are excluded; several Greek links and funding amounts are still marked UNVERIFIED in the CSV. Aggregators (CB Insights, Seedtable, Caplight) were used for some rounds and are labelled as such.
- Funding currencies are kept as reported. Some figures and founding years differ between sources; the notes column records each conflict.
- Sifted, EU-Startups, Tracxn and several portfolio pages could not be read automatically, so lists drawn from them are missing.
